PROFESSIONAL SUMMARY

Industrial Engineer with experience in continuous improvement, process optimization and data-driven operational management in manufacturing environments. Skilled in KPI monitoring, root-cause analysis, productivity improvement, cost reduction, process standardization and automation. Combines business understanding with Python, SQL and business intelligence tools to turn operational needs into sustainable improvements and support cross-functional decision-making.

CORE COMPETENCIES

Continuous improvement | Process optimization | Operational excellence | KPI management | Productivity improvement | Cost reduction | Root-cause analysis | Process standardization | Data analysis | Business intelligence | Report automation | Project leadership | Stakeholder management | Agile methodologies

PROFESSIONAL EXPERIENCE

Senior Data Analyst | Smart Manufacturing Digital Leader

Pirelli Neumáticos | Merlo, Buenos Aires | May 2023 — Present

Continuous improvement through data, automation and cross-functional digital initiatives.

- Lead cross-functional improvement initiatives, coordinating requirements, priorities, validation, deployment and user adoption.
- Develop automated reports and data workflows using Python, Pandas and SQL, reducing repetitive work and improving information reliability.
- Build real-time monitoring solutions for operational KPIs, alerts and process status using Angular, Flask and APIs.
- Create Qlik Sense dashboards for trend analysis, deviation detection, statistics and post-mortem evaluation.
- Integrate multiple data sources into reliable datasets that support operational analysis and management decisions.

Senior Process Engineer

Pirelli Neumáticos | Merlo, Buenos Aires | August 2019 — April 2023

Process performance, productivity, cost reduction and continuous improvement.

- Monitored industrial KPIs and analyzed performance deviations to support operational decision-making.
- Coordinated productivity improvement actions based on data analysis and root-cause identification.
- Developed cost-reduction initiatives focused on production gains, efficiency and resource optimization.
- Defined, documented and audited manufacturing processes and operational standards.
- Automated recurring reports to reduce manual work and improve performance visibility.

TOOLS AND TECHNOLOGIES

Python | Pandas | SQL | Qlik Sense | Tableau | ETL | APIs | Angular | Flask | Git | AWS

EDUCATION

Industrial Engineer
Universidad Nacional de La Matanza | Graduated
