SUBJECT

Professional Introduction

I am writing to introduce my professional profile and express my interest in opportunities related to data, automation, business intelligence, digital solutions and project leadership. As an Industrial Engineer with a systems-oriented profile, I have developed my career at the intersection of operations, software, analytics and project execution.

In my current role at Pirelli, I design and develop automated reports, data workflows, web applications and BI solutions using Python, SQL, Qlik Sense, Angular, Flask and cloud technologies. I also coordinate cross-functional initiatives, translating operational needs into technical requirements and supporting projects from definition to deployment and user adoption.

Previously, as a Senior Process Engineer, I worked on KPI management, productivity improvement, cost-saving initiatives, root-cause analysis and process standardization. This experience gave me a strong understanding of industrial operations and the ability to connect technical solutions with measurable business impact.

I am particularly interested in opportunities where I can combine data, software, process knowledge and project coordination to build practical and scalable solutions. I believe my hybrid background allows me to communicate effectively with both technical teams and business stakeholders.

I would welcome the opportunity to discuss how my experience, technical background and cross-functional approach could contribute to future projects and business objectives. Thank you for your time and consideration.

Sincerely,

Ignacio Smail
